

CLINICAL STUDY PROTOCOL: ONCO-2026-X

Phase 3 Trial: Kinase Inhibitor ONC-402 in Stage IV NSCLC

Sponsor: BioPharma Therapeutics Oncology Development Group

Protocol ID: ONCO-2026-X | IND: 148922 | Version: 3.1 | Date: Jan 2026

SECTION 4.1: INCLUSION CRITERIA (Page 4)

INC-1: Age ≥ 18 years at the time of signing informed consent.

INC-2: Histologically confirmed Stage IV Non-Small Cell Lung Cancer (NSCLC) (ICD-10 C34.90).

INC-3: ECOG Performance Status score of 0 or 1 within 14 days of screening.

INC-4: Adequate renal function: $\text{eGFR} \geq 50 \text{ mL/min/1.73m}^2$ (LOINC 33914-3).

INC-5: Adequate hematologic reserve: $\text{ANC} \geq 1500 \text{ cells/uL}$, $\text{Platelets} \geq 100,000 \text{ /uL}$, $\text{Hemoglobin} \geq 9.0 \text{ g/dL}$.

INC-6: Adequate hepatic function: $\text{Total Bilirubin} \leq 1.5 \times \text{ULN}$, $\text{ALT and AST} \leq 2.5 \times \text{ULN}$.

INC-7: Washout period of at least 28 days (≥ 28 days) from prior chemotherapy or targeted systemic therapies.

SECTION 4.2: EXCLUSION CRITERIA (Page 5)

EXC-1: Active, untreated, or symptomatic Central Nervous System (CNS) brain metastases (SNOMED 723188008).

EXC-2: Active autoimmune disease requiring systemic immunosuppressive therapy (e.g., Crohn's disease, ulcerative colitis, rheumatoid arthritis) within past 2 years (SNOMED 424144002, ICD-10 M05.9, K50.90).

EXC-3: Unstable cardiac disease: NYHA Class III or IV heart failure (ICD-10 I50.9) or acute MI within 6 months.

EXC-4: Known active Hepatitis B, Hepatitis C, or HIV with detectable viral loads.

EXC-5: History of drug-induced or non-infectious pneumonitis requiring steroid intervention.

EXC-6: Uncontrolled glycemic status: HbA1c $\geq$ 8.5% (LOINC 4548-4).
